

gps—photo link

GIS PRO series GSE-475

camera/gps requirements:

- gps—photo link works with either GPS enabled cameras (i.e. Ricoh 500SE, Nikon P6000, iPhone 3G)
- or separate digital camera and a GPS device (i.e. Trimble, Garmin GPS units).
- Cell phones must embed GPS data into .jpg images.

gps—photo link

gps—photo link

GIS PRO series

creates

- Watermarked photos showing Lat/Lon and optional direction of photo
- Reports in Microsoft Word and HTML pages that include watermarked photos and detailed maps showing the photo's location
- Google Earth files that show your photos around the world
- .kmz files for easy sharing with clients and friends
- Spreadsheet (.csv file) to show photo and attribute data as a table

features

- Add comments, titles or logos to photos
- Play recorded audio in extra data screen
- Supports Ricoh 500SE digital camera features including memo fields, compass heading and Bluetooth connectivity with external GPS or Laser Rangefinder devices
- Advanced datum support including State Plane and HARN

ESRI ArcGIS Extension

- ArcGIS Extension creates ESRI Shape Files or Personal GeoDatabases
- Display photos with hover tool
- Create offset positions or wedges showing field of view.
