

Flexible receiver for exterior and interior leveling and alignment applications

The rugged, flexible Spectra Precision® Laser HR350 Receiver can be used as either a handheld or rod-mounted unit for basic leveling and alignment jobs. Exceptionally easy-to-use, the HR350 Receiver features a durable composite housing that is both lightweight and capable of withstanding a drop of up to 1.5 meters (5 feet) onto concrete. The HR350 Receiver displays the beam elevation on the front or the back side of the unit so it's easy to determine on grade—even in the poorest jobsite conditions.

Features & Benefits

- Easy-to-read dual LCD and LED displays make it ideal for both exterior and interior applications
- Snap-in rod clamp allows fast switching from rod-mounted to hand-held applications
- Tough IP67 waterproof housing protects the unit from dust, moisture, and accidental drops
- Two on-grade sensitivities (fine and medium) let you get to grade faster on a wide variety of job sites
- 100 db loud speaker can be easily heard over the entire job site

Applications

- Leveling concrete forms and footers
- Measuring cut and fill for small site preparation jobs
- Exterior and interior leveling, aligning and marking
- 1 m (4 ft) marks
